4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **mybday.lol** for a **Consumer web app with paid listings (birthday leaderboard)** site, generated on October 11, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

80/100

SEO HEALTH SCORE

Critical Issues Found:

1. Every page is sent no-store: nothing can be cached on the CDN
2. No page answers 'famous birthdays today' (homepage has no famous people)
3. 'Age 48' is the age at the board's next date and reads as wrong today
4. 404 pages have an empty server-rendered body
5. Date pages are 37% unique on the strict measure; no holiday context

Quick Wins:

1. Server-rendered not-found page
2. One sentence with sign, birthstone and flower on date pages
3. dateModified in JSON-LD from the sitemap's lastmod
4. Remove X-Powered-By; share image for Terms and Privacy
5. Publish llms.txt

2. Audit Categories

2.1 Technical SEO

Score: 84/100

What Works

- 382 sitemap URLs, all 200, all self-canonical
- Fully server-rendered; valid robots.txt; single-hop redirects
- Five security headers on every response

Findings

Every page is sent no-store High

All public pages answer Cache-Control: private, no-cache, no-store, so a CDN can't cache anything.

Recommendation: Static/ISR for content pages; short revalidate plus revalidateTag from the Stripe webhook for boards.

404 body is empty without JavaScript Medium

Right status and noindex, but no message, links or lang in the HTML.

Recommendation: Add a server-rendered app/not-found.tsx.

About 240 KB gzipped JS/CSS on every page Medium

Radix UI loads on content-only pages such as Terms.

Recommendation: Lazy-load the Boost, Share and Gift menus and the date picker.

X-Powered-By header exposed Low

Responses carry X-Powered-By: Next.js.

Recommendation: Set poweredByHeader: false.

2.2 Content Quality

Score: 68/100

What Works

- Facts verified by script on all 366 date pages: 0 errors
- No filler or AI-pattern text (content_quality.py 91-92)
- Cited commonness rank on every date page

Findings

Age label reads as wrong today Medium

The number is the age the person turns on the board's next date.

Recommendation: Label it 'Turns 48' (client's copy, 07 D12).

No holiday or observance context Medium

/december-25 never mentions Christmas; strict uniqueness is 37%.

Recommendation: A small holidays table feeding the About paragraph (client OK, 07 D9).

Placeholders on legal pages Medium

'[Launch date]' and '[If required: ... Article 27 GDPR.]' are visible.

Recommendation: Client fills them in or edits them in the admin.

Famous-people data bugs Info

Adult performers, duplicate dates, 'footballer' labels, cut-off labels and February's rarest date.

Recommendation: Fixed during the audit with tests; data refreshed.

2.3 On-Page SEO

Score: 88/100

What Works

- Unique titles (45-58 chars) and descriptions (123-159) on all 382 pages
- One H1 per page, no skipped heading levels
- Every date page is 3 clicks from anywhere

Findings

Date page H1 has no 'birthday' Info

'Everyone celebrating October 7' is the client's mockup copy.

Recommendation: Leave as is; the title carries the keyword.

Famous list is the third block on date pages Medium

On unclaimed boards the H1 is followed by nobody.

Recommendation: Show 3-5 names under the H1 (client).

2.4 Schema / Structured Data

Score: 84/100

What Works

- Valid JSON-LD on every template; 5,490 Person nodes linked to Wikidata
- BreadcrumbList on all date and month pages

Findings

No dateModified Low

WebPage and CollectionPage nodes carry no dateModified.

Recommendation: Reuse the sitemap's lastmod.

Homepage WebSite description changes daily Low

It embeds today's #1 and amount.

Recommendation: Use a stable description.

No breadcrumbs on How it works, Terms, Privacy Low

Those pages have no BreadcrumbList or WebPage node.

Recommendation: Add them; JSON-LD is in findings/schema.md.

2.5 Performance (CWV)

Score: 84/100

What Works

- Lighthouse 94-95 (lab, mobile)
- CLS 0 on every page
- No third-party scripts; no images to load

Findings

> **Simulated mobile LCP 2.9-3.0 s Medium**
>
> Over the 2.5 s limit; caused by render-blocking CSS and the 77 KB font, not the server.
>
> **Recommendation:** Shrink shared CSS; confirm with field data after launch.

> **Every page is sent no-store High**
>
> All public pages answer Cache-Control: private, no-cache, no-store, so a CDN can't cache anything.
>
> **Recommendation:** Static/ISR for content pages; short revalidate plus revalidateTag from the Stripe webhook for boards.

2.6 AI Search Readiness

Score: 76/100

What Works

- All AI crawlers allowed and served full HTML
- Lighthouse Agentic Browsing 2/2
- Answer-first FAQ and About paragraphs

Findings

> **Sign, birthstone and flower only in fact cards Medium**
>
> Text extractors drop them on date pages.
>
> **Recommendation:** One sentence in the About paragraph.

No llms.txt Low

/llms.txt answers 404.

Recommendation: Publish one at launch.

No freshness signal Low

Extractors guessed 2026-01-01 from the footer year.

Recommendation: dateModified and a visible 'updated' line.

2.7 Images

Score: 85/100

What Works

- No content images, so no alt-text or CLS issues
- Share image on every date, month and personal page

Findings

Terms and Privacy have no share image Low

They still declare summary_large_image.

Recommendation: Add the default share image.

---

3. Action Plan

Phase 1: Critical Fixes Before launch

- Make pages cacheable (ISR + revalidateTag from the Stripe webhook)
- Server-rendered 404 page
- Sign/birthstone/flower sentence on date pages
- dateModified in JSON-LD; honest lastmod
- Backfill famous people for all 12 months on production

Phase 2: High-Impact Improvements Before launch

- Lazy-load menus and the date picker
- Remove X-Powered-By; share image for legal pages; stable WebSite description
- Skip link and aria fixes
- Publish llms.txt

Phase 3: Content & Authority With the client

- 'Turns 48' label
- 'Famous birthdays today' strip on the homepage
- Holiday/observance line per date
- Fill in legal-page placeholders

Phase 4: Monitoring & Iteration After launch

- Run /seo audit on https://mybday.lol
- Submit the sitemap; watch 'Crawled - currently not indexed' for 2-4 weeks
- Connect Search Console and CrUX data

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)
